John,

Attached are deliverables (3 files) for the revision of the animal non-cancer respiratory pathology section. In addition, I have attached an inventory/progress report (Deliverables to EPA - 5Nov13) detailing the contents of the attached items. In short, I was able to complete items 1 through 3 of the ICF task prioritization list from 10/17/13. In a separate email I will be sending some new background references that are now cited in the revised document. These are in response to the reviewers' comments and are not from the 2013 literature search.

Today marks the last day that I will be reporting to work at ICF. For the time being, I will maintain an employment relationship with ICF. However, any questions you may have regarding the attached should first be directed to Jennifer Welham.

As always, it was a pleasure working with NCEA and I wish the formaldehyde team much success as the assessment progresses.

Sincerely,  
Brian
